

## How Does Our Technology Work

What do we know about hydrogen peroxide? It's perfectly safe to swish with, yet it kills germs and odors. So, imagine diluting hydrogen peroxide and misting it into the air. It floats through the air, settles on surfaces, and kills germs and odors at their source. That is basically what our technology is doing.

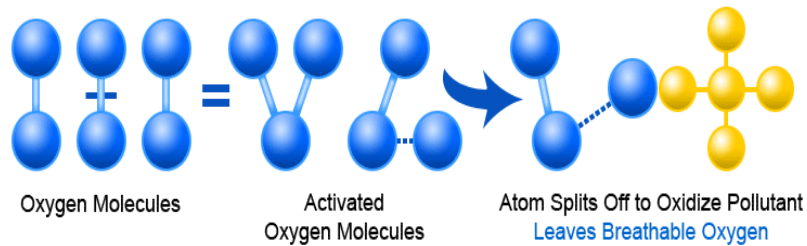

Our purifiers use a proprietary blend of technologies that combines two different types of ionization along with activated oxygen to purify indoor air. Just like nature does during a thunderstorm - but without the noise!

Kansas State University Tested the Technology and found that, in less than 12 hours, over 99.9999% of H5N8 Flu virus (Avian Influenza) was neutralized. Imagine that kind of germ-killing power in your bathroom, kitchen, and bedroom.

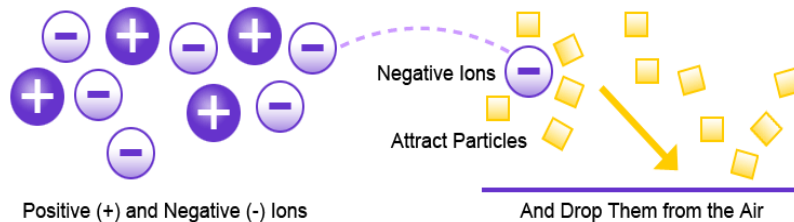

## Air Purification - The Natural Way

Electrical Discharges (lightning) create an abundance of activated oxygen (O<sub>3</sub>) in the air. These same discharges also create an abundance of negative ions in the air. Negative ion generation is referred to as the "Thunderstorm Effect"

### Activated Oxygen - How it Works

### Negative Ions - Indoor Space Travelers

Lightweight and portable, our Purifiers are a total protection package for your whole home environment. With this amazing technology, you get all the benefits of hydrogen peroxide without misting anything into the air. This technology is proven and that is why it's certified by the Space Foundation and is the premier choice for cleaning the air in space craft.
